

viewbook.com

Use a TransIP.nl Domain With Your Viewbook Account

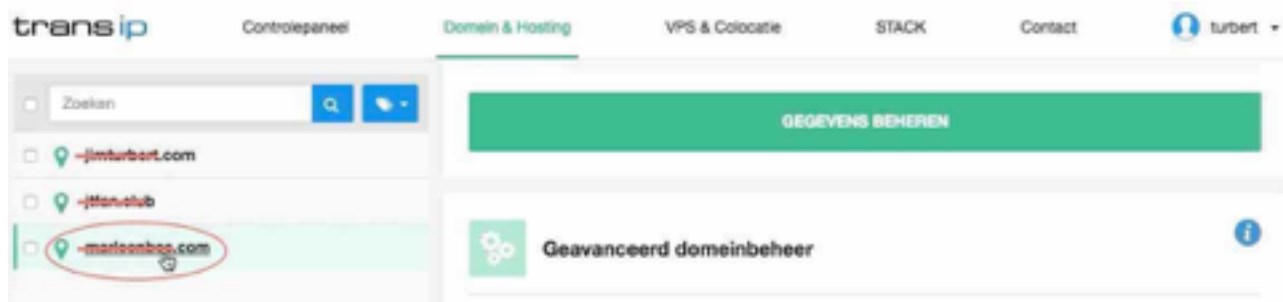

1 Log in to your TransIP.nl account and click on “Controlepaneel” in the settings menu.

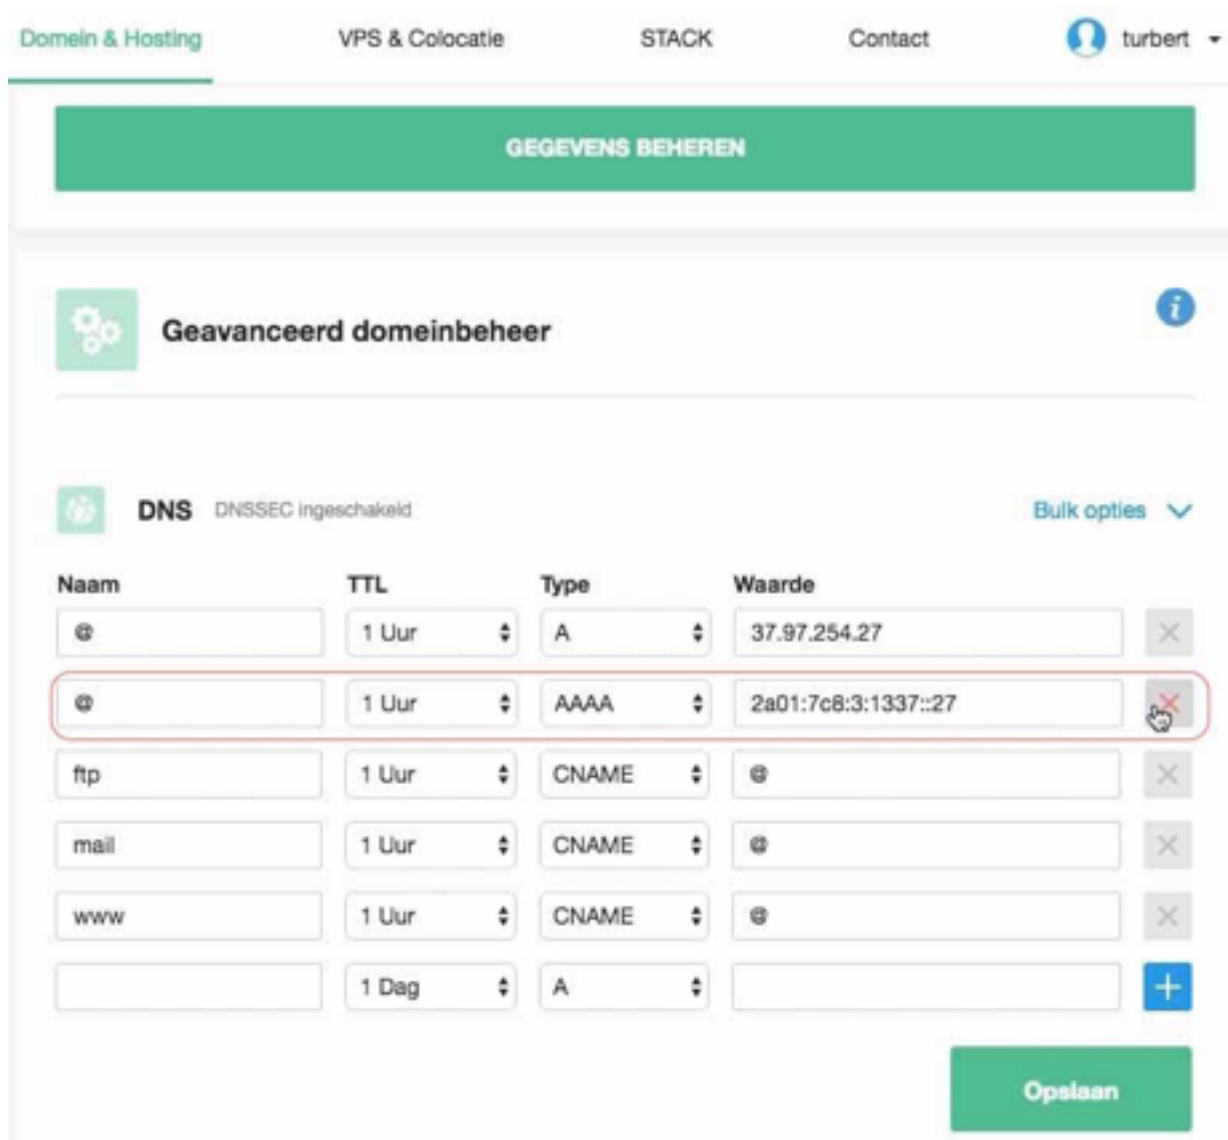

2 Click “Domein & hosting” in the menu near the top of the page.

3 Select the domain you want to edit from the list on the left side of the page and scroll down to “Geavanceerd domeinbeheer.”

4 Delete the AAAA record. This is for something called IPv6. Viewbook doesn't use IPv6 yet, so this record is pointless.

5 Look for the www record in the list of records. It's probably a CNAME. If it's not a CNAME, switch it to a CNAME and change the waarde to: **sites.viewbook.com**

6 Look for an A record with the name @ in the list of records. It's probably at the top of the list. Set the waarde to: **174.129.219.149**

7 Click "Opslaan" when you are finished.

The screenshot shows the 'Geavanceerd domeinbeheer' (Advanced domain management) interface. The 'DNS' section is active, and the DNSSEC is 'Ingeschakeld' (Enabled). A table of DNS records is displayed with the following columns: Naam, TTL, Type, and Waarde. The records are:

Naam	TTL	Type	Waarde
@	1 Uur	A	174.129.219.149
ftp	1 Uur	CNAME	@
mail	1 Uur	CNAME	@
www	1 Uur	CNAME	sites.viewbook.com.
	1 Dag	A	

At the bottom of the interface, there are two buttons: 'Annuleren' (Cancel) and 'Opslaan' (Save). The 'Opslaan' button is highlighted with a red box.

8 Add the domain name to your Viewbook account in the "Custom domain name" field in the [Dashboard of your account](#). Make sure you click save when you are finished.
