## Use a Dreamhost Domain With Your Viewbook Account

1 Log in to your Dreamhost account and click “Manage Domains.”

The screenshot shows the DreamHost dashboard interface. The top navigation bar includes the DreamHost logo and a 'HOME' dropdown menu. The left sidebar contains a list of navigation options: Dashboard, DOMAINS (with a dropdown arrow), Manage Domains (highlighted with a red circle and a mouse cursor), Registrations, Reg. Transfer, Secure Hosting, Remap Sub-Dir, Anonymous FTP, Mongrel and Proxy, Stop The Hacker, DreamPress, and Site Statistics. The main content area is titled 'Dashboard' and features a 'What's New?' section with several announcements, each including a 'Where?' link and a launch date.

What's New?

**Dedicated servers** with SSDs are now available. You can now choose a dedicated box with a 12 core CPU, up to 64GB of RAM and up to 2TB of storage.

Where? Launched 7 months ago

We know you like the fast servers so **DreamPress 2** is now even faster with Solid State Drives (SSDs), PHP 5.5 with OpCache and optional Hip Hop Virtual Machine (HHVM).

Where? Launched 8 months ago

You can now enable Node.js and Custom Ruby with Ruby Version Manager (RVM) support on our VPS. **It's time to get one.**

Where? Launched 10 months ago

**Managed VPS Hosting** with SSDs has arrived!

All new VPS servers with SSDs, Ubuntu 12.04 LTS and 1GB of RAM are here. Get your new virtual private server today for only \$15/mo.

Where? Launched a year ago

Interested in cloud computing? DreamCompute is now in advanced beta! Get more info and start your free trial here.

Where? Launched a year ago

**2** Scroll to the list of domain names and click “DNS” next to the domain you want to use with your Viewbook site.

### Manage Domains

[Add Hosting to a Domain / Sub-Domain](#) [Register a New Domain](#)

All hosted domains on this account

Domain	Registration
<b>annalisajohansson.com</b> <a href="#">DNS</a>   <a href="#">Visit</a>	5 mons+ left.
<b>eugenekim.cc</b> <a href="#">DNS</a>   <a href="#">Visit</a>	4 mons+ left.
<b>eugenekim.net</b> <a href="#">DNS</a>   <a href="#">Visit</a>   <a href="#">WebFTP</a>   <a href="#">FTP</a>   <a href="#">Add IP</a>	Unknown
<b>eugenekim.us</b> <a href="#">DNS</a>   <a href="#">Visit</a>   <a href="#">Add IP</a>	9 mons+ left.

### 3 You will notice a heading that says “Add a custom DNS record to...”

- Add **www** to the name field.
- Change the type to **CNAME**.
- Change the value to **sites.viewbook.com**
- Click “**Add Record Now!**” when you are finished.

#### Refresh DNS for eugenekim.us now?

Did you make a change to DNS that doesn't seem to be propagating? Try refreshing your domain's DNS information from here:

I want to refresh all of eugenekim.us's DNS info now! (No more than one refresh is allowed per 12 hours)

[Go!](#)

#### Change eugenekim.us's whois nameservers

<b>Nameserver 1:</b>	<input type="text" value="ns1.dreamhost.com"/>
<b>Nameserver 2:</b>	<input type="text" value="ns2.dreamhost.com"/>
<b>Nameserver 3:</b> (optional)	<input type="text" value="ns3.dreamhost.com"/>
<b>Nameserver 4:</b> (optional)	<input type="text"/>

[Set these nameservers for eugenekim.us!](#)

#### Add a custom DNS record to eugenekim.us:

<b>Name:</b> (leave blank for just 'eugenekim.us')	<input type="text" value="www"/> .eugenekim.us
<b>Type:</b> (Want MX? <a href="#">Go here!</a> )	<input type="text" value="CNAME"/>
<b>Value:</b>	<input type="text" value="sites.viewbook.com"/>
<b>Comment:</b> (optional)	<input type="text"/>

Click “Add Record Now!” when finished.

[Please wait...](#)

**4** Add an **A** record for the naked domain, or **@** in the same place.

- Set the name field to **@**.
- Set the type to **A**.
- Set the value to **174.129.219.149**.
- Click **“Add Record Now!”** when you are finished.

Add a custom DNS record to eugenekim.us:

**Name:**  .eugenekim.us  
(leave blank for just 'eugenekim.us')

**Type:**    
(Want MX? [Go here!](#))

**Value:**

**Comment:**   
(optional)

**5** It should look like this when the process is complete.

Your custom DNS records for eugenekim.us:

Record (eugenekim.us zone)	Type	Value
	A	174.129.219.149
www	CNAME	sites.viewbook.com.

**6** Add the domain name in the [Viewbook Dashboard](#). Normally, it starts working in a few hours, but it could take a day or so for the records to propagate. If it doesn't work by the next day, you probably did something incorrectly.
