# viewbook.com

Use a Hostmonster Domain With Your Viewbook Account

1 Log in to your Hostmonster account, scroll down to "domain management," and click "DNS Zone Editor."

2 Select the domain you want to use from the list.

3 Scroll down to "A (Host)" records. Edit the @ A record by clicking the edit button. Set:
- host record - @
- points to - 174.129.219.149
- (optional) ttl - 3600

Click "save" when you are finished.

Zone File Records

A (Host) What's this?

host record	points to	ttl	action
@	174.129.219.149	14400	save cancel
localhost	127.0.0.1	14400	edit delete
ftp	74.220.207.113	14400	edit delete
~~karlakuskin-net~~	74.220.207.113	14400	edit delete
~~www.karlakuskin-net~~	74.220.207.113	14400	edit delete

4 Scroll down to the "CNAME (Alias)" records. Click "edit."

CNAME (Alias) What's this?

host record	points to	ttl	action
mail	~~juliakuskin.com~~	14400	edit delete
www	~~domains.tumblr.com~~	14400	edit delete

5 It should look like this when the process is complete. Set the www CNAME to:
- host record - www
- points to - sites.viewbook.com
- (optional) ttl - 3600 - Click save when you are finished.

CNAME (Alias) What's this?

host record	points to	ttl	action
mail	~~juliakuskin.com~~	14400	edit delete
www	sites.viewbook.com	14400	save cancel

6 It should look like this when you are finished.

www	sites.viewbook.com	14400	edit delete

7 Add the domain name in the Viewbook Dashboard. Normally, it starts working in a few hours, but it could take a day or so for the records to propagate. It if doesn't work by the next day, you probably did something incorrectly.
